

ImageSite® *Print Room Manager*

A Solution For Attended Print Rooms

The optional **Print Room Manager** module works with eQuorum's Plot Station® plotting solution that is included within ImageSite. This module lets print room operators easily process job ticket print requests.

Print Room Manager Features

Print room operators can review requested print sets and re-prioritize or re-direct the job to a different plotter. This is helpful in directing the job to the most efficient plotter for the job or should a device go down.

The job ticket information can also be printed. The user who submitted the print request can be notified of the status of the print job via e-mail.

When used with ImageSite's **Advanced Job Ticket** feature, Administrators get the flexibility to configure job ticket interfaces for a variety of user levels — from novice to expert and anything in between.

For instance, a job ticket can be configured to hide options and set defaults providing novice users with a very easy-to-use job ticket to streamline their print requests. Expert users can be provided with all options for maximum flexibility.

Other features include the following:

- Full job ticketing with ability to bill multiple recipients
- Maintain a database of sender and recipient addresses
- Notify the job requester that the job is finished
- Archive job sets

ImageSite® is a Web-based solution for the management, collaboration, and distribution of engineering and technical documents.

ImageSite empowers communication with a single, secure point of access for all project or product information.

- **Project Collaboration**
- **Supply Chain Collaboration**
- **Engineering Drawing Management**
- **Design Review Cycle**
- **Wide-area Facilities Management**
- **Corporate Document Distribution**
