

ImageSite Cloud

Advantages

- No hardware/software requirements, we take care of all of it
- Less internal hardware and software provisioning
- Reduce overall IT spend and additional resources
- Provides SAML 2.0 Single Sign-On with Active Directory Integration
- We take care of all backups, updates, patches, and restores, and can backup to a different AWS region if needed
- Inherent network redundancy from a backbone provider.

Benefits

- Accessible by any permissioned user without needing a VPN, from anywhere in the world
- Easily scalable in terms of servers (both number of processors and processor speed) and amount of storage
- Uses AWS, one of the pre-eminent providers of secure data services and security certifications using Amazon Web Services IDS/IPS
- Customer can still maintain access to the Cloud system and the database
- Private Cloud gives client full control and use of the servers employed (i.e., they are not shared with any other clients)
- Available as a hybrid solution, using eSynch=Site software, to synchronize with an on-premise instance of ImageSite.
